

how I am destroying the E.P.A. and putting the health of

E. SCOTT PRUITT  
ADMINISTRATOR

Your total disregard for public health and environmental protection does NOT come through in this. PLEASE REWRITE!

Friends and Colleagues –

We have been hard at work enacting President Donald Trump's agenda during my first year as EPA Administrator. His courage and leadership have been key to our success. From his decision to ~~exit the Paris Accord~~ to his executive order empowering EPA to review and rescind the Clean Power Plan, the President is delivering on his promises and getting results for the American people.

war on public health

pro-polluter

anti-

ignore climate change

and trigger 150,000 asthma attacks in kids

We are following his lead. Days after being sworn in, I addressed EPA's employees and committed to listening and working cooperatively with states and stakeholders to tackle today's environmental challenges. In my first year, I traveled to 30 states and U.S. territories and met with 34 bipartisan governors and over 350 stakeholder groups. We are taking important actions in collaboration with – not opposition to – the states.

flew 1st class on the tax payers' dime

chemical, pesticide and coal execs

I committed to refocusing the Agency on its core mission. Today, we are focusing on cleaning up contaminated lands, improving air quality and rebuilding America's water infrastructure. Finally, I promised that we would restore the rule of law. We are rescinding and replacing the burdensome Waters of the U.S. rule, and we ended the harmful and wrongful practice of "sue and settle."

that protects drinking water for 117 million Americans

vital

put a disgraced polluter in charge of

These are just a few examples of my commitment to fulfilling these promises. This report details EPA's accomplishments and what they mean for the American people and the environment. The sum of these actions is monumental: In year one, EPA finalized 22 deregulatory actions, saving Americans more than \$1 billion in regulatory costs.

at risk

POLLUTERS

We have made tremendous progress in year one to implement the President's vision. EPA today is more efficient, more effective and more transparent in carrying out its all-important task of protecting human health and the environment. Much work remains to be done though. We will help repair our nation's crumbling water infrastructure; we will continue to clean up and revitalize more Superfund sites; and we will work with states to continue to improve air quality. Thanks to our reforms and improvements in year one, we now have the framework and policies in place to tackle these problems head on.

less

destructive

This is a lie. Stop lying!

I look forward to working together to accomplish even more progress in 2018.

further hollowing out the E.P.A.

Sincerely,

E. Scott Pruitt
